

F2K Senior Debt Raise — Lender Profile & Outreach Focus

Draft for review — Uwe & Dennis

13 May 2026 · Version 3 (re-scoped to senior debt focus)

Purpose

This document defines who F2K is approaching for senior debt on the Branscombe and Seafields facilities, how the offering is structured, and what we need to settle before we can start outreach in earnest.

It is a working draft. Mark it up, correct anything wrong, fill in the gaps flagged in Section 5, and send it back. Once signed off, it becomes the brief that drives InvestorPilot's prospect targeting, scoring, and message generation — and it is also the same brief Affluent Connections (Simon's team) would need from us if we engaged them.

Context — why we are running this ourselves

Stamford Capital and Front Financial were engaged to place the combined ~\$18.7M senior facility across both projects. That process has stalled and is not delivering. We are now running a parallel direct process targeting HNW direct lenders and family offices who write private debt cheques into syndicated facilities.

This document is built around that audience. It is not about advisor-placed wholesale equity (which you can source via your own network when relevant), and it is not about the long-deferred tokenised fund. The current operational target is the senior debt syndicate.

1. F2K's investment surface — and what we're focused on now

For clarity, F2K has three distinct investment tracks. Only one is the current operational focus.

Track	What it is	Status / channel
A — Senior debt (project facilities)	Per-project senior secured debt facilities. Branscombe \$16.2M construction; Seafields \$2.5M land. Syndicated across multiple HNW / family office lenders.	PRIMARY FOCUS. This is what InvestorPilot's outreach targets.

Track	What it is	Status / channel
B — Junior / equity (wholesale)	Junior debt and project equity. \$125K minimum ticket via advisor or warm intro.	Sourced via Uwe's own network. Not part of the outreach platform.
C — Tokenised GREH Fund	Pooled fund, on-chain tokens, \$100M target. Pre-AFSL.	Deferred. Do not lead with this in cold outreach.

Operational focus for the next 6 months: place the Branscombe and Seafields senior debt facilities into a syndicate of HNW direct lenders and family-office private debt allocators, replacing the stalled broker process.

2. The two senior debt facilities we are raising

Each project SPV requires a senior secured facility, separately documented and separately drawn. The two facilities together form an \$18.7M combined platform position, but lenders can participate in either or both — we are not requiring a single counterparty to take the full combined amount.

Branscombe Estate — \$16.2M senior construction facility

Project location	122–124 Branscombe Rd, Claremont TAS — ~10 km from Hobart CBD
Project scope	37 × 3-bedroom modular homes across 5 house types (111 modules)
Co-developer	Barr Builders Pty Ltd (contributes land + builder of record)
Modular supplier	Unison Modular — fixed-price DDP contract
Planning	Approved (PLN-21-408.02), valid to September 2027
Gross realisation value	\$25.15M (blended average \$679,730 per dwelling)
Total development cost	\$19.57M (incl. finance)
Development margin	22.2% on GRV / 28.5% on cost
Facility amount sought	\$16.2M
Indicative rate (per IM)	8.5% p.a. + 1% line fee + 1% establishment + 0.5% exit
Facility term	~22 months

Security	First registered mortgage over the development site; standard development-loan security package (GSA, sponsor guarantees, builder step-in)
Anchor offtake	15 affordable/CHP homes (~\$9.75M — 40% of GRV) submitted to Homes Tasmania for bulk settlement Months 12–13
Investor cash deposit confirmed at M0	\$500K (from Uwe's own network)
Refinance / exit	M17–M22 retail dwelling settlements, facility cleared ~M19

Seafields Estate — \$2.5M senior land facility

Project location	Pepper Gate, Waggrakine WA — ~8 km north of Geraldton CBD
Project scope	141 residential lots within the 442-lot Seafields master-planned community
Title holder	Dual Focus Pty Ltd ATF Dual Focus Trust (John Thompson)
Development partner	Humfrey Land Developments (Kenesta) — bears all ~\$8.46M civil infrastructure cost
Cooperation Agreement	Tri-party — Factory2Key, Dual Focus, Kenesta — signed 19 March 2026
Average lot price	\$150,000
Gross realisation value	\$21.15M
Facility amount sought	\$2.5M
Indicative rate (per IM)	8.0% p.a. capitalised
Day-1 LVR → stabilised	71% → 24% within 3–6 months once civils deliver lot titles
Facility purpose	Day-1 discharge of \$1.8M Thompson encumbrance + \$200K Tranche 1 civils + \$300K progressive titling + \$200K professional fees
Security	First registered mortgage; principal recovery of \$17,730/lot per Clause 8.7 of the signed Cooperation Agreement
Anchor offtake (indicative)	14-lot GROH (Government Regional Officers Housing) lease — 10-year + 2x2-year options, with WA Housing Authority since 5 May 2026
Sponsor advance already injected	\$200K

Partner track record	Humfrey: 155+ lots sold in prior Seafields stages, 2,000+ lots across the Mid-West region over 15+ years
Facility term	~36 months across staged settlements

Why the two facilities sit well together for a lender

A lender taking exposure across both facilities sees diversified state risk (TAS + WA), diversified product type (modular construction vs. residential subdivision), and government offtake optionality on both sides (Homes Tasmania anchor for Branscombe, GROH for Seafields). Repeat-business pipeline is also strong: a written invitation from Premier Rockliff to participate in the ~200-home Homes Tasmania tender Q3/Q4 2026 sits behind the facility.

A lender can participate in either project alone, but the combined story is the one that opens conversations with the larger allocators.

3. How the syndicate is structured

This is the part of the offering that needs the most explicit articulation in cold outreach. Lenders will want to know up front: am I taking the whole facility, or am I joining a syndicate, and if so on what terms?

Element	Position	Notes for lenders
Lead lender	Sought, but not required	If a lender wants to take a lead arranger role and bring in co-lenders we welcome that. Otherwise we coordinate the syndicate directly.
Participation basis	Pari-passu, first registered mortgage	All syndicate participants share security pari-passu. No subordinated tranches within the senior facility.
Ticket sizes	\$1M–\$5M typical	Branscombe syndicate of 4–8 lenders; Seafields likely 1–3 lenders. Larger cheques welcomed; smaller (sub-\$1M) considered case-by-case.
Documentation	Standard non-bank development loan agreement	F2K's legal counsel drafts; lender's counsel reviews. Aim for a single facility agreement across all syndicate participants per project.
Decision timeline	Indicative interest within 2–3 weeks; documentation 4–6 weeks	Pace reflects the parallel-process posture — we are not waiting on a broker.

Open question for Uwe (captured in Section 5): the exact syndication mechanics — do we want a single lead, or are we comfortable running the syndicate ourselves? This affects messaging.

4. Who we are targeting (lender ICP)

InvestorPilot's discovery, scoring, and outreach is built to find one specific kind of decision-maker: a principal at a family office, or a HNW individual with a private-debt allocation, who personally writes (or co-writes) cheques into Australian property development debt.

This is a fundamentally different audience from financial advisors. The decision-maker is the lender, not someone placing other people's money. The conversation is a credit conversation — LVR, security, offtake quality, sponsor track record — not a product-suitability conversation.

Profile of the ideal lender

Decision-maker	Family office principal or CIO with personal allocation authority; or HNW individual who personally lends into property development; or principal of a private debt vehicle
Capital available per cheque	\$1M–\$5M typical; some up to \$10M+
Asset class focus	Private debt — specifically Australian property and development debt
Risk position	Comfortable with first-mortgage senior secured at 65–75% LVR on development land or construction
Return target	8–11% p.a. coupon, contracted-term debt — not equity-style upside
Decision cadence	Weeks, not months. Capable of moving on credit decisions without committee delay.
Geography	Australia primarily. Singapore and Hong Kong family offices with Australian property allocations also in scope.
Existing track record	Has lent into at least one Australian property development facility in the past 36 months — this is the strongest single predictor
Reachability	Findable on LinkedIn and via professional networks. Visible enough to be enriched with verified email.

Roles and titles we accept

- Family Office Principal, Founder, Director, or CIO
- Head of Private Debt / Head of Credit / Head of Real Estate Debt at a family-office-backed private debt vehicle

- Principal or Managing Partner of a private credit fund that allocates to property development
- HNW individual described publicly as a property investor, developer, or private lender
- Director or Trustee of a SMSF with documented private debt allocations
- Founder or Principal of a property syndication business that lends as well as places equity

Roles and titles we reject

- Retail bank credit officers — wrong channel, wrong approval pathway
- Mortgage brokers — we already have a stalled broker process
- Equity-only family offices that do not allocate to debt
- Tech / venture-focused family offices
- Public REIT managers — wrong return profile
- Pure listed-equity advisors
- Generic financial advisors placing retail client money — wrong product

Firm and vehicle types we accept

- Single-family offices with declared private debt / real estate debt allocations
- Multi-family offices with private debt mandates
- Private credit funds focused on Australian property development debt — but only those at a size where a \$2M–\$5M ticket is meaningful (sub-\$200M funds; the Qualitas / MaxCap tier is generally too large and would expect to take the whole facility)
- Private debt vehicles within boutique investment houses
- Wholesale property syndicators that occasionally co-lend
- Self-managed lending vehicles owned by HNW developers who lend on the side

Firm and vehicle types we reject

- Large institutional debt funds (>\$1B AUM) — too big for our facility sizes; expect whole-of-deal
- Bank-owned platforms — credit committee timelines incompatible with our parallel-process posture
- Retail mortgage trusts and listed mortgage funds
- Equity-only family offices
- Pure private equity funds

Geographic priority

Geography	Priority	Reason
Sydney	Highest	Greatest concentration of family offices with private debt mandates
Melbourne	High	Strong family office community, several known private debt allocators

Geography	Priority	Reason
Singapore (with AU property allocation)	High	Significant family office presence; many already lend into Australian development
Brisbane / Perth	Medium	Smaller pool but high-value when located
Hong Kong (with AU property allocation)	Medium	Similar profile to Singapore, slightly smaller universe
TAS / Geraldton (project locales)	Low	Local advisor angle does not apply for senior debt — lenders are not geographically tethered to the project site

This is a deliberate departure from the previous draft. For senior debt, the lender's geography matters far less than for advisor-placed wholesale equity — credit teams are happy to lend into a project they will never visit. The centre of gravity is Sydney and Melbourne, with Singapore as a meaningful third.

5. Decisions I need from you before launching outreach

These are the gaps that must close before any cold outreach goes live. Each is short, but each materially affects what messages can say.

5.1 Are the indicative rates in the IM the rates we will hold to in outreach?

Branscombe IM shows 8.5% + 1% line + 1% establishment + 0.5% exit. Seafields shows 8.0% capitalised. Are these the rates we are willing to quote in cold outreach, or is there a range we will negotiate within? Lenders will ask for the indicative term sheet within the first one or two messages.

Recommendation: confirm a defensible quoted rate and a floor we will hold. The pre-send compliance filter will allow only those numbers.

5.2 Lead arranger role — do we want one?

Two options for syndicate structure:

- Active lead arranger sought — first lender to commit takes the lead, structures the docs, and brings co-lenders. Faster execution but the lead lender extracts a fee or rate premium.
- F2K-coordinated syndicate — we run the syndicate directly. All lenders pari-passu, no lead fee. Slower coordination but no premium leakage.

Recommendation: open the conversation to a lead arranger if one self-identifies, but default to F2K-coordinated. The message angle changes substantially between the two — Uwe to decide.

5.3 Combined facility versus per-project participation

In cold outreach, do we:

1. Lead with Branscombe alone (larger facility, stronger anchor offtake, the bigger story)
2. Lead with Seafields alone (smaller facility, faster close, lower-LVR profile)
3. Lead with the combined \$18.7M position (diversification story, larger total but bigger ask)
4. Tailor lead facility to lender size — large lenders see combined, mid lenders see Branscombe, smaller lenders see Seafields

Recommendation: option (4). Discovery scoring tags each lender with a likely ticket size; the sequencer routes the right lead facility per lender.

5.4 Track record framing

What sponsor track record do we cite in cold outreach? Lenders care about:

- Completed modular projects (any?) — name, scale, outcome
- Founders' prior development experience (Dennis and Uwe)
- Co-developer / partner track record (Barr Builders for Branscombe; Humfrey for Seafields — Humfrey's 2,000+ lots is a strong cite)
- Any prior facility repaid in full to lenders (the single strongest credit cite)

Recommendation: build a one-page Sponsor Capability Statement we attach to follow-up messages. Counsel approves the wording.

5.5 The Stamford / Front situation — what do we say if asked?

Lenders in this market talk to each other. Some will know Stamford and Front were running the process. When asked, what's our line?

- Direct: "We engaged broker-led processes that stalled. We're now running directly to lenders we want long relationships with."
- Soft: "We're running a direct process to selected lenders." (Leaves the prior process undescribed.)
- Silent: only address if specifically asked, otherwise lead with the project.

Recommendation: soft framing in cold messages; direct framing in conversations once a lender has engaged. The Inbox Agent needs this script.

5.6 Project equity / junior layer — do we mention it?

Some lenders will want to see who else has skin in the deal. The \$500K Branscombe investor cash deposit and the \$200K Seafields sponsor advance are credit-positive facts. Do we:

- Lead with them as evidence of stack alignment
- Disclose only when asked
- Stay silent (risks lenders concluding the stack is thin)

Recommendation: include the confirmed equity / advance figures in the second-touch message (the one that follows the initial connection). They are credit-positive and lenders will respect the disclosure.

5.7 The tokenised fund — what do we say if asked?

When a lender Googles F2K and finds the Fund Tokenisation site, what do we want them to think?

- Internal response (for the Inbox Agent): "That platform is a long-term project pipeline vision and is not connected to this senior debt raise. The facilities we are discussing are conventional first-mortgage development debt, documented and secured in the standard way."
- External: should the public Fund Tokenisation site itself be paused or re-framed while we run the senior debt process? Some credit teams will see crypto/RWA messaging as a negative signal.

Recommendation: keep the script for the Inbox Agent regardless. Strongly recommend re-framing the public site to remove ambiguity for the next 6 months.

5.8 AFSL / regulatory framing

Senior debt to a wholesale-investor SPV is generally less regulatorily complex than placing investors into a managed investment scheme. But the question is still worth pinning down: do we represent these facilities as wholesale-only borrowings (s708 path), and is there any AFSL coverage required at our end for soliciting lenders?

Recommendation: counsel-confirmed before any outreach ships. Affects message phrasing and the wholesale-investor declaration step in the pre-send flow.

6. Suggested review workflow

5. Read through this document — should take 15–20 minutes.
6. Confirm or correct the senior-debt-only focus and the description of the Stamford / Front situation in Section 0.
7. Mark up Section 4 — adjust the lender profile, accept/reject lists, and geographic priorities to match your view.
8. Decide each of the eight items in Section 5.
9. Send back to Dennis. Once signed off, this becomes the operational brief that drives InvestorPilot's targeting, scoring, and message generation — and is also exactly what we would hand Affluent Connections if we ended up engaging them in parallel.

After sign-off: the discovery prompt and scoring rubric get re-weighted to the lender ICP, the per-facility message templates get built (one for Branscombe-lead, one for Seafields-lead, one for combined), the pre-send compliance filter gets the quoted rates locked in, and the Inbox Agent gets the response scripts for the Stamford and tokenisation questions.
